

Drove to the next county to get my new attic ladder.

Placed reinforcement 2X4s everywhere I would place plywood and around the door.

Shows the reinforcement around the door. Oops no pics of the reinforcement work.

I used cargo straps to hold the ladder in place while I fastened it.

The ladder is installed.

Molding in place around the ladder door. Still not painted.

I don't have pictures of the rafter reinforcement it was just too hot up there. But I made before and after vids shown on the main webpage.
